

Saurav Sharma

Senior Frontend Developer | React | TypeScript | Shopify Apps

Mohali, Punjab, India | +91 7018051504 | sharmasunny027@gmail.com | linkedin.com/in/saurav-sharma-frontend

PROFESSIONAL SUMMARY

Frontend developer with 7+ years in React. Spent the last year building Shopify apps, five of them shipped to production in React and TypeScript on Polaris, after five years of client and product work in React and Next.js.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Next.js, Redux, React Router, React Testing Library

Shopify: Shopify app development, Shopify Polaris, Shopify APIs

UI & Styling: HTML, CSS, SASS, Tailwind CSS, Bootstrap, responsive and design-system work

Backend & Tools: REST APIs, Express.js, Git, JIRA, Figma, AWS

WORK EXPERIENCE

Senior Software Developer — CollationHub

Sep 2025 – Present | Remote

- Shipped five Shopify apps to production in my first year: Diamond Jewellery Builder, Instant Diamond Catalogue, Ring Sizer, Ring Styler and the Ring Configurator.
- Built the merchant admin UIs in Shopify Polaris, with a shared component layer underneath so all five apps feel like one product rather than five separate tools.
- Set up the React Router architecture behind the admin screens, so merchants move between sections without a full page reload on every click.
- The Ring Configurator started as a Shopify embed. Merchants asked for it on their own storefronts, so I rebuilt it as a standalone React/Express app that now runs outside Shopify too.
- Moved the codebase to TypeScript. Fewer runtime surprises, and new developers find their way around faster.
- Cover components with React Testing Library, focused on the parts of the builders customers actually touch.
- Currently building a 360° product viewer for jewellery listings.

Web Designer & Frontend Developer — Codenomad

Sep 2020 – Jul 2025 | Mohali, Punjab

- Built and maintained client web apps in React and Next.js over five years, working from Figma files.
- Put together a reusable component library the team reached for on every new build. Cut about a quarter off our setup time.
- Handled the performance and accessibility side of delivery: Core Web Vitals, WCAG basics, on-page SEO.

Web Designer — IGeek Team

Jan 2019 – Aug 2020 | Mohali, Punjab

- Redesigned client websites end to end, from wireframe through to the live site.
- Engagement rose around 30% on the redesigns we measured.
- Built the wireframes and mockups myself, then handed them over for development.

PROJECTS

Ring Configuration App — React, Express, Shopify

Interactive configurator for wedding rings. Customers pick setting, stone and band, and see the result before ordering. Runs inside Shopify and as a standalone embed on merchant sites.

Diamond Jewellery Builder, Instant Diamond Catalogue, Ring Sizer, Ring Styler — Shopify apps

A product builder for custom pieces, live inventory search, an online ring-sizing tool, and a mix-and-match styler. All React and TypeScript on Polaris.

CodeWarranty — SaaS platform

Warranty and claims management. Built the frontend for the claim lifecycle and the analytics views.

GetCover — B2B claims platform

Claims system with a live Fixably sync. The sync removed the duplicate-entry problem the ops team had been working around by hand.

EDUCATION

BCA — NSCBM Government College, Hamirpur (Himachal Pradesh University) | 2015 - 2018

Senior Secondary, Science — HP Board, Dharamshala | 2015
